Wastewater sample
HTP-2024-01-15
Grimm et al. 2026
Kraken2 clade reads
151-member
viral ground truth
(+ non-viral
background)
One set of
abundance files
distribution_0/1/2
CAMISIM 2.0
→ 3 Illumina samples
~16.5 M read pairs each
PBSIM3 + ccs
→ 3 PacBio HiFi samples
~479 k reads each
the same abundance files drive both simulators,
calibrated to the same 12% viral + phage read share (Section 2.2)
7 pipelines × 6 datasets
= 42 scored runs
Viral-only scoring by NCBI taxid
at ≥1 / ≥10 / ≥100 reads
Viral recall, precision and F1 for each pipeline,
reported separately for each modality
